

How to Bill for Cataract Surgery Post-Op Care

NOVITAS MEDICARE NEW MEXICO

PCLI uses a -54 modifier on surgery claims to reduce the surgeon's fee by 20%. This reduction allows you to charge for your post-op care at the date that you assume responsibility. The normal post-op period is 90 days—starting the day of surgery. We will bill up to the date of transfer and then you may bill for the care you provide from this date forward.

Please note that the following pointers ONLY work with Novitas Medicare New Mexico:

- You must provide at least one post-op exam or service before submitting your global charge for the remainder of the 90 day period.
- Medicare considers you responsible for the patient's post-operative care from the "date of transfer" as noted in the patient's post-op letter from PCLI. Bill retroactively to this date—but no more than 90 days from the day of surgery.
- When sending global claims to Medicare, use the same procedure code (CPT) as the surgeon, along with a -55 modifier using RT and LT to indicate the right or left eye.
- Include the following information—as contained in our post-op letter—on your HCFA 1500 claim form:

[Box 17] Surgeon's name

[Box 17b] Surgeon's NPI number

[Box 19] Show the date span of your post-op care:
- enter the date of transfer followed by a dash
- enter the date that is exactly 90 days from the day of surgery
- then list the total number of days in this date span

Calculation Tip—A simple method of calculating 90 days is to count 12 weeks forward on a calendar, then add 6 days.

For example, if surgery was on Monday, count ahead 12 Mondays. Then, adding 6 days, the 90th day would be the next Sunday.

A "Billing Span Calculator" is also available at www.pcli.com/od

[Box 21] Enter the diagnosis code used for surgery, as noted on our post-op letter

[Box 24a] Date of transfer

[Box 24d] Procedure or CPT code, 55 modifier, surgery eye (RT or LT)

[Box 24g] Number of post-op days

- If you are sending claims to insurance carriers other than Medicare, check with them first for billing instructions, as they may vary.
- When surgery is done on both eyes several days apart, you may perform post-op exams on both eyes at the same time. However, you must bill separately for each eye. A 50% reimbursement reduction for the second eye does not apply since the surgeries were done on different dates.
